Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NyAlternate names: thymidylate Kinase

C;Species: Haemophilus influenzae

C;Species: Haemophilus influenzae

C;Species: Haemophilus influenzae

C;Accession: A64153

-!- CATALYTIC ACTIVITY: ATP + dTMP = ADP + dTDP.
-!- SIMILARITY: Belongs to the thymidylate kinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       14 ATP (Potential).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                              US-10-681-223-2

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence

Patent No. 6664097

GENERAL INFORMATION:

APPLICANT: Ming-Hui WEI

TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC

TITLE OF INVENTION: THEREOF

TITLE OF INVENTION: THEREOF

FILE REFERENCE: CLO01305 DIV

CURRENT FILING DATE: 2002-10-22

PRIOR FILING DATE: 2001-10-21

PRIOR PLICATION NUMBER: 09/994,880

PRIOR FILING DATE: 2001-10-22

NUMBER OF SEQ ID NOS: 4

SOFTWARE: PASLSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          225 ECTSFIPEARAVLDLVDQCPKQIQKGKRQVVAIEGLDATGKTTVTQSVADSLKAVLLKSP 284

Patent No. 655195
GENERAL INFORMATION:
TYPE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: NUMBER: US/09/252,991A
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR FILLING DATE: 1998-02-18
PRIOR FILLING DATE: 1998-02-18
PRIOR FILLING DATE: 1998-02-18
PRIOR FILLING DATE: 1998-07-27

Patent No. 655177 Application US/0925291A

Patent No. 655177 Application US/0925291A

GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 20577

```
The invention describes a new isolated nucleic acid molecule encoding a kinase of the thymidylate kinase subfamily. The human kinase polypeptides and nucleic acid molecules are useful as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins, or serve as targets for the development of human therapeutic agents that modilate kinase activity in cells and tissues that express the kinase proteins are also useful in raising antibodies or eliciting another immune response, as reagents in assays designed to quantitatively determine levels of the protein in biological fluids, as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          diagnosing a disease or a predisposition to a disease mediated by the polypeptide or nucleic acid molecule, or for treating a disorder associated with the absence of, inappropriate, or unwanted expression of the protein or nucleic acid molecule. The antibodies are useful for tissue typing, in isolating or detecting kinase proteins, or in pharmacogenomic analysis. This is the amino acid sequence of the novel human thymidylate kinase subfamily kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    markers for tissues in which the corresponding protein is preferentially expressed, or in screening a compound for the ability to stimulate or inhibit interaction between the kinase protein and a molecule that normally interacts with the kinase protein. The kinase proteins and nucleic acid molecules can also be used in providing a target for
                                                                                                                                                                                                                                                                                                           New human kinase polypeptides and nucleic acid molecules, useful in the development of human therapeutic targets, or for diagnosing or treating disorder associated with the aberrant expression of the protein or

The invention relates to an isolated peptide consisting of or comprising an amino acid sequence chosen from an amino acid sequence chosen from an amino acid sequence of human kinase protein (ADC63370), an allelic variant of the kinase, orthologue or fragment. Also included are an isolated antibody that selectively binds to the kinase, an isolated mucleic acid molecule encoding the kinase proteins detailed above (appearing as the cDNA, ADC63379), and gene.

ADC63371), a gene chip comprising the nucleic acids, a transgenic non-human animal comprising the nucleic acids, a moleic acid vector comprising the nucleic acids in a sample, detecting the presence of the kinase in a sample, detecting the presence of the kinase of the kinase or condition mediated by a kinase protein and identifying a disease or condition mediated by a chaman kinase protein and identifying a modulator of the expression of the kinase involves. The kinase is useful for identifying a modulator, for identifying an agent that binds to the kinase, for biological assays concleted to kinases, drug screening assays, identifying compounds that conclude that normally interaction between the kinase protein and a conclude that normally interaction between the kinase protein and a conclude that normally interaction between the kinase protein and a concluding assays to discover compounds that interact with kinase protein of conficulate or inhibit interacting a disorder characterised by an expension of the protein assays to disease states, diagnostic tools as an immunological marker for aberrant confines states, diagnostic tools as an immunological marker for aberrant confines states, diagnostic tools as an immunological marker for aberrant confines states, diagnostic tools as an immunological marker for aberrant confines the facilitating protein for facilitating protein trafficking or facilitating protein for manipulation of a protein for inhibiting protein for inhibiting protein for production, probes, primers, productions are production.
                            Novel isolated human kinase protein useful for drug screening assays, as

     antigenic portions of the proteins, for determining chromosomal positions of the nucleic acid molecules, for making vectors containing the gene regulatory regions, as hybridisation probes for determining the presence, level, form and distribution of nucleic acid expression. The gene encoding the kinase is located on human chromosome 2. The present sequence represents the novel kinase.
                                                                                                                                                                                                                                                                                                             300
